

Project report – Outreach 2014 -15

Summary

Our speakers give dozens of talks each year to adult audiences about population and sustainability and we invariably receive positive feedback.

Background

There are few if any other organizations offering speakers in the UK on the impact of population levels and trends on current society and sustainability.

Timing

July 2014-June 2015

Location

United Kingdom

Partners

Groups which invite us to speak to their members and provide venues include business, environmental, faith, humanist, retiree and scientific groups.

Methodology

We contact adult groups and offer them speakers and films. We maintain a growing roster of speakers and support those speakers through the provision of resources, including example presentations.

Outputs

We made several dozen speeches around the country during the year.

Beneficiaries

The immediate beneficiaries are those who hear the speeches and their organizations. Other beneficiaries are those who benefit from any reduction in population arising from changed attitudes and behaviours or attendees.

Impact

We receive favourable feedback from those who hear our speakers, with comments such as “eye opening” and “thought provoking”.
